FORSYS
Forward Thinking

80% Time Saved for an Innovations Company, Forsys Built an Integration for Bulk Upload of Pricing Segment

Insight

The US-based client is a leading innovator in sustainable thermal solutions and engineered materials. The innovation company wanted to create and maintain different price lists, distinct segments, and strategy assignment rules.

Forsys used Oracle Integration Cloud (OIC) services and REST API to integrate bulk upload of Pricing segment and Strategy Assignment; this reduced 80% time to create pricing segments and strategies in the manual process.

Industry
Appliances, Electrical, and Electronics & Manufacturing

Employees
5001-10,000

Headquarters
California, USA

Business Challenges

The key business challenges for the client were:

01 **Creating different price lists**

02 **Maintaining different Segments to match the price lists**

03 **Maintaining different Strategy Assignment Rules to match the price lists**

04 **Spending a lot of time in creating Pricing Segments and Strategy Assignment in the manual process**

Transformation Journey

As a part of solution, Forsys used OIC services and REST API to do the following:

- Developed an integration for Bulk upload of Pricing Segment creation
- Built an integration for Bulk upload of Pricing Strategy assignment creation
- Users can now save and access the file in a specific location; the integration automatically creates or updates the Pricing Segment and Strategies based on the input data

Impact

- **80% savings in user time**
- **80% reduction in manual efforts**
- **Minimized errors in creating the data**
- **Minimal human intervention**
- **95% improvement in data accuracy**

About the Client

The client, headquartered in California, US, innovates and designs technologies in material science, engineered material, and thermal management solutions that protect critical applications of its customers. The client develops and combines technology to achieve set performance targets for its customers' applications. The innovation client also uses thermal solutions and engineered materials to make the products of its customers safer and more reliable.
