Insight

A leading provider of high-performance video streaming and cable access solutions encountered challenges with their laborious forecasting process. To create weekly executive reports, a team of 4-5 resources compiled daily KPI forecasting data for new orders, shipments, and backlogs.

Ayara analyzed the requirements and designed the solution for the client, which enabled E2E automation of the forecasting process, automated application of business rules during data collection from multiple sources, and usage of pre-built integration with Oracle Cloud, Oracle EBS, and SFDC. This resulted in 100% data accuracy with 0% human error and decline in manual tasks.

Business Challenges

The client manually retrieved data from multiple sources and consolidated it into spreadsheets, leading to frequent errors.

The key challenges:

- Laborious manual process.
- Business continuity risk.
- Daily publishing of KPI forecasting to display changes in regard to new orders, backlog, and shipments.
- Resource driven consolidation of forecasting from multiple sources.

TRANSFORMATION JOURNEY

Ayara designed and implemented the solution within 3 months, which enabled the client to accurately identify and predict revenue growth.

The key highlights of the solution are:

- Automation of 99% forecasting process.
- Reduction in manual tasks to review reports and manage exceptions.
- Digitization and streamlining of business rule applications during data collection.
- Usage of pre-built integration with Oracle Cloud, Oracle EBS, and SFDC.

IMPACT

- **Minimization of manual efforts.**
- **Improvement in the reliability and accuracy of the forecast.**
- **Elimination of manual processes and dependency on Excel spreadsheets.**
- **Eradication of business continuity risk with process automation.**
