Case Study

Learn how using Forsys helped a global printing enterprise create long-lasting relations with its subscribers

About the Client

The client is a California-based 3D printing technology company helping businesses to develop better products and bring them to market in less time. With customers across 17 countries and looking at global expansion, this venture-backed company offers an innovative digital manufacturing platform that enables repeatable production of end-use parts with industrial-grade materials and exceptional surface finish, irrespective of the count.

The Background

Founded in 2013, the client started out like a lot of other companies do before they reach their growth phase, focusing primarily on developing and selling their digital manufacturing platform.

After a few years when our client hit a growth trajectory, it came to realize the significance of being able to proficiently track receipts and collect revenue hassle-free. While the uniqueness of the printing firm's digital platform was widely applauded by the customers, the disconnected subscription management was hampering business productivity and relations with the subscribers.

Business Challenges

The different teams at the client manually stitched together data and applications, leveraging the siloed applications to deliver customer outcomes. This resulted in making the process labour intensive and time-consuming, forcing the team to depend on manual processes.

Below are the key challenges that plagued the client that compelled them to find a solution that could generate invoices, accurately reflect pricing and consumption over a defined period.

- Manually modify multiple subscription lines based on recurring billing plans. For example, if the user has chosen a 5-year subscription with monthly recurring billing, the user needs to enter 60 lines and calculate the monthly billing amount.
- Reconcile the data entry gaps.
- Generate subsequent invoices based on recurring billing plans.
- Revise/ put on hold subscription lines until customer acceptance is received.
- Cancel the subscription before the original tenure expires.
- Manual management of the complete subscription lifecycle impacted the efficiency of invoice processing and failed to provide real-time visibility across the billing ecosystem.

The Solution

The client, engaged in its core business, was unable to focus transformational efforts on modernizing their document-driven workflows, and so they turned to Forsys to automate back-office tasks with precision for better customer experience and responsiveness. We became their partner of choice because of our proven ability to offer rapid time-to-value deployment, deliver quick ROI and competitive pricing.

Forsys provided different Order Flows (covered item, subscription flow, covered and subscription flow, cancellation of the subscription flow) to address the various business needs of the customer.

Our unified platform helped the client to manage subscriptions hassle-free and implement changes in the pricing strategy, as and when needed. Below mentioned are the advantages the client gained after collaborating with Forsys:

- One invoice from the contract start date till the acceptance date and recurring monthly invoice is generated.
- Start billing only after acceptance.
- Generate credit memos on a pro-rata basis on cancellation.
- Simplify revision rates as the invoices can be generated as per the customer's choice.
- Generate future invoices based on the revised dates.

Benefits & Results

Forsys automated the clients' billing cycles, ensuring that the printing major was able to track and view their revenue in real-time and make changes on the go. By creating a more unified and simplified user journey for the client, Forsys helped them focus on their core business strategy and execution.
Today, the client has:

- **Saved 60-80% time in manual data entries and reached 100% accuracy through automated subscription processes.**
- **Reduced 90% of user efforts by automating recurring invoices.**
- **Achieved 100% accurate and seamless reconciliation.**
- **Streamlined the recurring subscription billing with automatic renewals.**
- **Gained complete visibility of the revenue forecast.**
- **Possibility for pro-rated subscription cancellation in an ongoing tenure and automatic credit memos generation.**
