Case Study

Learn how Forsys helped Harmonic seamlessly migrate data from legacy systems to Oracle Cloud and improve their user experience

About The Client

Harmonic is a US-based worldwide leader in Video Delivery Technology solutions and the first to provide broadcasters, pay-TV operators, service providers, and other media companies with operational video efficiency that is ready to deploy on a global scale. Incorporated over 25 years ago, it helps customers respond to the challenges of the Digital Video revolution while reaping its benefits, including the ability to deliver stunning video to viewers on any screen, anywhere.

The Background

The American technology major was running its applications on Oracle E-Business Suite (EBS) R11, 9i database which started to display signs of distress regarding performance, reliability and resilience. Being in the end-of-life mode, the necessary updates and support were not available for Oracle R11 which made the maintenance difficult. With time, operational efficiency started to impact Harmonic's productivity of teams.

Seeking to address several key operational challenges, Harmonic chose to move its operations from legacy Oracle EBS to Oracle Cloud. Oracle Cloud offers many benefits, but the following five reasons were the deciding factors in finalizing the decision to migrate:

- Leverage advanced features of Oracle Cloud for better performance and integrations.
- Modernize applications to fully transform and move towards the digital future.
- Enhance data integrity to 100% by moving legacy systems to Oracle Cloud.
- Refine data reconciliations for month-end/quarter-end closings which typically required 4-5 days.
- Improve efficiency and visibility through a single dashboard for Finance Managers and CFOs.

The Challenges

Harmonic was looking for a comprehensive solution to replace the ageing software and to be able to leverage modern technology for performance gains. The tech giant came to realize that it needed a single tool that can integrate multiple systems to resolve the latency issues caused by the ineffectual integrations. The varied challenges that plagued Harmonic were:

- Lack of a single tool for integrations across applications.
- Absence of tools/connectors for integrating Oracle EBS and Salesforce with Oracle Cloud Platform.
- Varied data structures and formats of their existing orders (master and transactional data) made data migration difficult.

The Solution

Harmonic engaged Forsys to lead this transformation, given our deep expertise in Oracle Cloud Migrations and understanding of its technology and business operations. Forsys was tasked to understand Harmonic's legacy system and recommend how it can be migrated to Oracle Cloud without any business disruptions. We took stock of the situation for Harmonic and helped the technology company to accelerate back on track and migrate its legacy systems to a modern Oracle cloud platform.

As a first step, Forsys applied cloud assessment and transformation framework for a combined upgrade and migration to Oracle Cloud. Forsys leveraged Flodata to connect the Cloud and On-Premise applications and integrate Oracle Cloud, Salesforce, and Agile Systems. Flodata facilitated event-driven integration, maximizing the potential of cloud-native applications for real-time analytics and decision making. Flodata's reconciliation feature ensured data and system integrity for business processes by validating and reconciling data right at the entry-point.

Using the Oracle Cloud connectors from Flodata, Forsys successfully migrated Harmonic's transactional and master data to the Cloud, reducing the schedule and cost by 40%. Below mentioned were a few of the improvements:

- Integrated Oracle EBS and Salesforce with Oracle Cloud Platform using Flodata.
- Improved the system response time.
- Automated Price list updates, request date, and schedule the ship date.
- Achieved forecast and revenue accuracy for the quarter/month end to less than a day.

Benefits & Results

By migrating Oracle EBS to Oracle Cloud, Forsys was able to optimize processes and improved user experience. Here are the enhanced business values that Harmonic experienced post the migration to Oracle Cloud:

Role-based security.

Saved 30% cost and time using Forsys built Accelerators (Flodata):
Pricing Accelerator | Data Migrations | Salesforce Integration

Entire migration was completed with savings of about 60 % time and effort.

Host cutover successful in the first attempt.

Improved cost efficiency by 60%.

Downtime was reduced drastically by 40%.
