17% Higher Lead Conversion with E2E Migration to SAP CPQ Leading to 28% Shorter Sales Cycle

Insight

A prominent E2E Commerce and Master Data Management (MDM) services provider was looking to retire their existing CPQ tool due to its incompatibility with the Salesforce Lightning Experience Interface.

Forsys strategized and migrated the client's entire quoting process from their current CPQ platform and implemented a new quoting solution, which enabled automation of proposal/document creation, usage of line items, whole quote discounting, self-service quoting, loading products in bulk, and reporting on costs for a quote. As a result, the client improved the lead conversion rate by 17%, shortened the sales cycles by 28%, and accelerated approvals by 95%.

Business Challenge

For the client, the lack of compatibility and disharmony of the current CPQ tool with the Salesforce Lightning Experience was a cause for concern.

Transformation Journey

Forsys designed the migration roadmap, retired the current CPQ tool, and implemented SAP CPQ (earlier CalldiusCloud) for the client.

The key highlights of the transformation journey:

- Mapping & evaluation of the present sales processes for guided sales process improvement and best practice recommendations.
- Examining the functional and workflow requirements of the existing CRM solution and the requisites for CPQ.
- Implementation of E2E process discovery to map and assess the management of product configuration and pricing.
- Functional assessment of SAP/CallidusCloud CPQ to maintain alignment with the client's expected outcomes.

Impact

17%
lead conversion rate improvement.

28%
shorter sales cycles.

95%
accelerated approvals.

About the Client

The client is a prominent Canada-based end-to-end Commerce and Master Data Management (MDM) services provider, supporting clients from strategy, platform selection, deployment, and hosting through to ongoing support: a single expert resource to help companies succeed in an ever-changing digital commerce landscape.

Solution Components

BMX CPQ, SAP CPQ (earlier CalldiusCloud)
