Case study

24% Reduction in IT Costs with E2E Management of SAP Financial Management Software

Insight

A leading subsidiary of a Japanese electronics conglomerate processed the account receivable (AR) invoices with SAP Financial Management software. They struggled with software optimization, upgrades, and maintenance due to lack of expertise in SAP Financial Management.

The client engaged Forsys as the managed service expert to streamline the functioning of SAP Financial Management software, which included stabilizing the accounting function, maintaining the IT General Ledgers per IFRS standards, creating financial reports, and running the subsidiary systems, such as Order-to-Bill, SAP Project Systems, and ServiceNow Ticketing System, without interruptions. Our sophisticated methodologies, leading process optimization solutions, and dynamic technology reduced the client's overall IT costs by 24%.

Business Challenge

The client, dependent on the SAP Financial Management Software for their finance, IT General Ledgers, financial reports, and other functions, faced a series of challenges.

01 Processing AR invoices for the IT division.

02 Management and maintenance of SAP Financial Management platform.

03 Monitoring and execution of patch upgrade and maintenance activities.

Transformation Journey

The key highlights of the approach to Forsys' proactive SAP managed services:

- Maintenance of general ledger in accordance with IFRS and HAL policies.
- Preparing and posting journals for accruals and reclassifications, prepayments & amortization etc.
- Execution of the IT close processes (including variance analysis and P&L reports) on monthly, quarterly, and annual basis.
- Creation of monthly P&L forecasts from existing ongoing activities as well as open sales & purchase orders.
- Collaboration with Accounts Payable Specialists to record expenses.
- Implementation of Order-to-Bill process to approve, bill and record customer activities.
- Creation of statutory, tax, insurance, and other ad hoc reports.
- Verification of annual fixed assets.

Impact

01 Overall IT cost reduction of 24%

02 Improvement in user experience and adoption, leading to revenue growth

03 Enhanced scalability, availability, and security of SAP Financial Management software

04 Periodic SAP upgrades for business continuity

05 Defect removal with preventive maintenance and predictive monitoring
