# 25% Revenue Jump with E2E Automation of Quoting & Proposal Lifecycle with Conga

## Insight

The seasoned sales team of a leading digital identity company spread across 20 countries was finding it challenging to increase sales because each of their prospects required customized solutions and pricing. A lot of man hours were spent generating proposals and quotes.

Forsys stepped in and automated the client's quoting and proposal generation processes in collaboration with Conga. The e2e digitization enabled the client to use product bundling, automate price calculations, renewals, and approvals, boost sales revenue by 25%, improve the win rate by 30%, and grow deal size by over 20%.

**Industry:** Software Development

**Revenue:** $100+ M

**Employees:** 600+

**Headquarters:** Massachusetts, US

## Business Challenge

The client provided their offerings and pricing based on specific customer requirements, which complicated the configuration. The absence of pricing standardization and automated product bundling, and the resource-intensive product selection and proration calculation processes caused sales inefficiencies and pricing inaccuracies.

The critical challenges faced by the client:

- Usage of excel spreadsheets for quoting and pricing
- Discount-based approval was time consuming.
- Resource-intensive & inflexible quoting system.
- Manual forecasting of opportunities.
- Insufficient differentiation between renewal and upsell opportunities.

## Transformation Journey

Forsys worked closely in collaboration with the client to dig deep & understand the nuances of the as-is processes. After which, we deployed Conga CPQ, which enabled the client to execute product bundling, automate price calculations, renewals, and approvals, optimize revenue streams, and create correct customer invoices.

The key highlights of the approach to the transformation:

- Implementation of Conga CPQ and executed OOTB asset-based ordering.
- Configuration of subscription-based products with business rules.
- Enabling of multi-level approval requests through dynamic advanced approvals
- Cloning of bundles in Quote Line Editor (QLE) to remove manual reprocessing of renewals and amendments.
- Allocation of amendment and renewal quotes with the original contract.
- Automation of calculation and VAT addition based on billing address.
- Simplification & streamlining of auto discounting.

## Impact

**Growth in sales revenue by 25%.**

**Bolstered win rate by 30%.**

**20% improvement in deal size.**

**Generation of higher number of quotes.**

**Reduction in duplicate account customer data.**

**Automation of quoting & configuration process for seven different price lists.**

**Configuration of pricing call-back scenarios for maintenance price calculation.**

**Simplification of renewal opportunity management process.**

## About the Client

The client is a global digital identity company for healthcare, that provides identity, authentication, and access management solutions that are purpose-built to solve healthcare's unique workflow, security, and compliance challenges. It enables healthcare securely by establishing trust between people, technology, and information across the increasingly complex healthcare ecosystem.

## Solution Components
