INSIGHT

A global wellness provider was looking to streamline its product and quote-to-order processes. Their disjointed legacy systems failed to accurately incentivize the organization's multi-national distributorship and eliminate the manual processing of routine and low-value tasks.

Forsys devised and implemented the solution that optimized and automated the client's multi-level marketing, and systemized the global outreach and product hierarchy. As a result, the client recorded 33% improvement in quote productivity, shortened their sales cycle by one-third, and reduced the number of quote versions by 13%.

BUSINESS CHALLENGE

For the client, managing the products and the quote-to-order process was a constant struggle. The legacy system couldn't incentivize the distributorship network and manual dependency led to frequent sales and pricing inefficiencies.

The key concerns of the client:

- Capturing account ownership based on territory.
- Time-consuming discount-based approval & product configuration.
- Customization of block pricing, and contract management for amendments and renewals.
- Automation of product recommendations
- Manual opportunity forecasting and capturing annual contract value (ACV).
- Differentiating between renewal and upsell opportunities.
- Management of unaligned multi-national distributor network.

TRANSFORMATION JOURNEY

Forsys leveraged the power of SAP CPQ (earlier CalldiusCloud) to streamline and automate the client's multi-level marketing, global outreach initiatives, and product hierarchy.

The notable highlights of the transformation journey:

- Execution of quote management and output capabilities.
- Quote Automation and configuration of product bundles.
- Revision of product rules and constraints to improve pricing accuracy.
- Cloning of bundles to eliminate manual reprocessing of renewals and amendments.
- Automation of calculation and added VAT based on the billing address.
- Authorization of multi-level approval requests.
- Reduction in number of quote documents and addendums.

IMPACT

01 Improvement in quote productivity by 33%.

02 Decline in sales cycle by over 30%.

03 Optimization of global operations.

04 Product genealogy and real-time volume targets.

05 Higher Quote-to-Order turnover for the global distributors.

06 Standardization of workflows and streamlining of business operations.

07 Better quoting capacity and automation of discounts.

About the Client

The client is a wellness company born from nature and shaped by science. Since 1956, the American manufacturer and distributor of natural nutrition supplements, beauty products, and household products has been developing nutrition, and home and body products that help people live well. The company is headquartered in California with global operations in Canada, China, Indonesia, Japan, Malaysia, and Taiwan.
