Case study

36% Boost in Sales Productivity with Implementation of Salesforce-Driven Lead-to-Quote Automation for a Machine Tool Manufacturer

Insight

A leading machine tool manufacturer struggled with a manual sales cycle, lacking efficiency in lead-to-quote operations, customer tracking, attendance, and expense management.

Forsys stepped in with a tailored Salesforce solution, meticulously designed to streamline the client's lead-to-quote process. The customized implementation focussed on advanced functionalities like attendance management, real-time customer visit tracking, and expense management. This led to streamline business operations, comprehensive customer view, and optimized sales and service processes.

Business Challenge

In a competitive global market, the client faced significant hurdles operating without an automated system. Managing the sales cycle end-to-end and lacking tools to monitor key internal and customer processes like attendance, visits, expenses, and quotations presented major operational challenges. The absence of an integrated system significantly hindered their efficiency and market position.

Here are the issues the client encountered:

- Incomplete customer interaction and transaction history
- Inability to identify and leverage cross-sell or up-sell potential
- Unmonitored sales team attendance and client engagements
- Disorganized expense management and reporting
- Inadequate system for creating and monitoring quotations
- Lack of analytics for strategic insights and decision-making

Transformation Journey

Forsys empowered the manufacturer with a successful transformation by employing its advanced Salesforce Sales Cloud implementation methodologies and extensive customization capabilities.

Here are the main highlights from the transformative journey:

- Introduction of a sophisticated lead-to-quote management system with robust validations, automations, and workflows
- Deployment of an attendance management system featuring punch in/out capabilities, integrated with a comprehensive leave management module tailored for the sales team
- Streamlining of customer visit management with the integration of location tracking and distance calculation via Google Maps, providing real-time insights into salespersons' field activities
- Implementation of customized reports focusing on attendance, customer visits, and expenses
- Establishment of a series of standard reports, each designed to suit different employee levels

Impact

- **+36% jump in sales productivity**
- **Enhanced expense management**
- **+28% rise in sales revenue**
- **Reduction in manual efforts with standardized quotations**
- **Improved attendance management control**
- **360-degree view of customers**
- **Rise in customer visits**
- **Increase in revenue opportunities**
