360° System Health Assessment Enables a Leading Software Company to Maximize Full Value from Conga CPQ

Insight

A leading global automation enterprise, preparing for a critical digital transformation initiative, sought a clear and structured view of how its existing Conga CPQ implementation could be modernized and optimized. However, a patchy in-house implementation, bespoke processes across the entire lead-to-cash process, numerous manual interventions, post-transaction data modifications, and under-investment in the application led to a CPQ system that left users frustrated and unproductive. Despite the robustness of the CPQ foundation, the absence of a structured assessment posed risks of misalignment, inefficiencies, and transformation delays.

To resolve these challenges, Forsys conducted a deep-dive assessment of the client's Conga CPQ landscape using its proprietary schema-based evaluation solution, AssessIQ for Conga CPQ. This assessment uncovered misconfigurations, technical debt, and optimization opportunities by analyzing metadata, transaction and master data, reviewing pricing models, and visualizing CPQ logic. As a result, the client received a comprehensive CPQ enhancement readiness roadmap—aligning architecture, minimizing risk, and confidently accelerating the upgrade.

Business Challenges

Upgrading their CPQ implementation was a key milestone for the client In their digital transformation roadmap. Unfortunately, the journey wasn't straightforward and was filled with blockers. The reason? Multiple years of growth and acquisitions had caused complexity in their existing Conga CPQ setup—ranging from undocumented custom logic to scattered assets and rigid workflows. While the client was clear in the intent to modernize, the absence of visibility into their present state created roadblocks that prevented them from moving forward with confidence.

Additionally, concerns around operational continuity, scalability, and transformation risk came to the forefront with the lack of a structured assessment.

Here are the key challenges the client faced:

- A bloated sales catalog made it difficult for sales reps to quickly find the product they want to sell
- Lack of reporting on CPQ performance, usage, and scalability metrics
- Missing documentation for legacy rule dependencies and data models
- No centralized system to validate pricing and configuration accuracy
- Inability to identify redundant logic across approval and discount workflows

Transformation Journey

Realizing that the absence of system visibility and architectural clarity was hampering the client from leveraging the full potential of their existing CPQ solution, Forsys launched a comprehensive Conga CPQ assessment to lay the groundwork for a smooth transformation. Forsys initiated the process with a strategic goal: to offer a 360° view of the existing CPQ ecosystem, uncover areas of risk and inefficiency, and design a clear, phased path forward.

Here are the key highlights from their assessment & advisory journey:

- System-wide extraction and analysis of metadata, transaction, and master data using Forsys' AssessIQ solution
- Visualization of CPQ structures such as bundles, rules, and approval workflows to identify misconfigurations and inefficiencies
- Development of a detailed system health report and readiness roadmap to drive alignment with stakeholders and accelerate decision-making
- In-depth review of pricing models, product configurations, and custom rules to identify redundancies and streamline logic
- Evaluation of data integrity and alignment with industry best practices, and technical architecture to ensure seamless transformation
- Design of customized recommendations focused on usability, scalability, and transformation readiness

Impact

- Complete visibility into the Conga CPQ ecosystem to enable transformation into a world-class application
- Clear architectural alignment to reduce Technical debt
- Faster stakeholder buy-in with a structured adoption plan
- Improved system readiness with actionable insights
- Elimination of hidden risks and inefficiencies
- Accelerated Transformation decisions with data driven insights

About the Client

The client is a software development business that enables companies to unlock the power of endless possibilities. They believe that by putting intelligent automation in the hands of many, organizations can eliminate friction from work, inspiring teams to create a culture of efficiency that accelerates business success. Efficiency creates momentum, driving people, work, and businesses forward. Currently, over 8,000 public and private sector organizations across 90 countries use the client platform to automate how work gets done, remove friction from business processes, and unlock the full potential of their people.
