Case study

60% Boost in Sales Operations for a Global Manufacturer with Custom Salesforce Sales Cloud Solution

Insight

A leading manufacturer that designs and builds highly engineered products for automotive, aeronautic, hydraulic, and security applications wanted to modernize their sales processes due to the challenges caused by disparate systems, leading to workflow inefficiencies and data inconsistencies.

Forsys implemented a custom Salesforce solution to unify and streamline their lead-to-order process and simplify their sales operations. As a result, the client witnessed a 40% decline in the lead-to-order cycle time and a 60% improvement in sales operations.

Business Challenge

For the client, the primary reason for modernizing the sales processes stemmed from the complexities of managing disconnected systems, which caused inefficiencies and data inaccuracies. Additionally, it was crucial to ensure that ongoing business activities were not disrupted while these gaps were resolved.

Here are the key difficulties that the client had to navigate through:

- Data redundancy & prolonged sales cycle due to the manual tools like Excel sheets & tracking systems
- Failure to integrate sales tools led to data discrepancies and impacted operational efficiency
- Maintenance of accurate and up-to-date product and pricing information
- Labor-intensive and time-consuming quoting and sales reporting processes
- Poor sales performance and customer satisfaction due to the inconsistent sales practices

Transformation Journey

The client onboarded Forsys as the strategic advisor and solution provider due to its proven quote-to-cash expertise. As a Salesforce Crest partner, Forsys initiated the project with a comprehensive discovery phase where pain points and areas of improvement were identified, followed by selecting the most appropriate tech stack. After this, a tailored Salesforce Sales Cloud solution was designed to meet the client's specific needs and rolled out in a phased approach.

Here are the key highlights of the transformation journey:

- **Consolidation of all sales processes into Salesforce Sales Cloud, ensuring a single source of truth**
- **Standardization of sales processes across the organization**
- **Automation of quoting and sales order processes**
- **Elimination of redundancies and manual errors with automation of repeat tasks and validations**
- **Seamless integration with existing ERP and financial systems, ensuring data consistency across the organization.**
- **Generation of customized reports and dashboards for real-time sales performance tracking.**

Impact

- 40% reduction in the lead-to-order cycle time
- 40% increase in sales productivity
- 60% improvement in sales operations
- ~70% enhancement in customer satisfaction scores
- Enhanced decision-making with real-time sales data and analytics
- Shorter time to market
- Lesser administrative tasks

About the Client

The client designs and builds highly engineered products for Automotive, Aeronautic, Hydraulic and Security applications. With three design laboratories in India and Europe, it is a leading Private R&D Organisation, with numerous inventions and patents to its credit.
