Case study

FORSYS
Forward Thinking

80% Savings on Man Hours through Forsys' Automation Process of Schedule Ship Date Update

Insight

The client is a leading American Video Delivery Technology and Services Company that designs and manufactures digital and fiber optics.

The Business Users of the company were spending a lot of time updating Schedule Ship Date (SSD) for multiple orders and were facing order locking issues in case they were using API systems.

Forsys' automation process helped the client update the SSD and save user time by ~80%.

Business Challenge

The client was updating SSD regularly based on different parameters like Material Availability, Customer request and so on, however, its business users were facing a few challenges such as:

- Spending a lot of time updating the SSD for Multiple Orders
- Updating SSD for all the split lines because the system was not considering the existing SSD for new lines in case the order lines were split into Multiple Lines
- System was creating a revision and resulting in Order locking issues, in case APIs were used

Transformation Journey

Forsys built the following solution to address the challenges:

- Built a VBCS screen where users can upload the input file
- Developed an automation script to update SSD for multiple orders
- Users can now directly upload the file from the Oracle UI
- Used another partner's integration platform, FloData, to run the file by using automation scripts

Impact

As a result of the automation script, the client's business users observed:

80% time saving

80% reduction in manual efforts

Elimination of order locking issues

20% reduction in number of order revisions

Minimal human intervention and manual errors

About the Client

The client, headquartered in San Jose, California, offers video delivery technology and services that support media companies and service providers in delivering ultra-high-quality broadcast and OTT video services to their consumers worldwide.

Solution Components

Oracle VBCS, OIC, FloData, and Selenium Script
