Case Study

99% Reduction in Errors, Forsys Customizes Spread Forecast for a Leading Cooler Manufacturer

Insight

The client is a well-known manufacturer of coolers, ice chests, and 500+ products that are vital for outdoor activities.

As a business requirement, the manufacturing company needed a weekly spread forecast for effective planning, but the users were uploading period-wise forecast data.

Forsys customized the program to split Period Forecast into Weekly Forecast data; this helped the client streamline its planning process and improved data accuracy by 95%.

Business Challenges

The key challenges for the client were:

- Absence of Weekly Spread Forecast
- Users uploaded Period-wise Forecast data that impacted planning
- Lack of standard functionality to split the Period Forecast data into weekly data

Industry
Manufacturing

Revenue
$300+ M

Employees
1001 - 5000

Headquarters
Texas, US

Transformation Journey

As a part of solution, Forsys did the following:

- Built a Custom Program to Split the Period forecast into Weekly Forecast based on User forecasts file and Calendar Days
- Users can place the Period-wise Forecast data file into a specific location
- Used PLSQL procedure to split the period-wise forecast data into weekly forecast data
- Used another partner's platform, FloData, to load the weekly forecast data into the target system

IMPACT

The impact of the customization is:

- **No manual intervention**
- **99% reduction in errors**
- **Automation of the entire process of splitting and loading the forecast week-wise**
- **Streamlining of the planning process**
- **95% improvement in data accuracy**

ABOUT THE CLIENT

The client, headquartered in Katy, Texas, manufactures ice chests, drink containers, and supporting accessories. The client also manufactures coolers and offers 500+ products that are essential for road trips, summer vacations, camping, and outdoor activities.
