CASE STUDY

50% Improvement in Business Productivity with Automation of Planning & Budgeting Processes

Insight

A global consumer entertainment products company used excel spreadsheets for financial planning, budgeting, and forecasting. It caused data errors, lowered business productivity, and lacked actionable insight to support critical business decision-making.

Forsys, in partnership with Oracle, implemented the solution that enabled the client to streamline and automate the planning and budget forecast processes, which helped them record 40-50% jump in business productivity.

Industry	Revenue	Employees	Headquarters
Manufacturing	$91+ M	1K+	New York, US

Business Challenge

The client's on-premises financial application failed to manage its complex account structure. The quarterly and annual close cycles took several weeks to complete. Additionally, the patch upgrades hampered productivity as they disrupted operations.

It needed a modern, integrated finance and planning solution capable of adapting to its evolving needs- like local currency planning, P&L dashboards, automated data feeds from ERP, and drill through details, balance sheet planning and ending the dependency on excel spreadsheets; streamlined the non-standardized reporting process; and data collection from ERP for financial reporting.

Transformation Journey

Forsys implemented Oracle Planning and Budgeting Cloud Service (PBCS) to enable the client to streamline and automate their planning and budgeting forecast processes.

The key highlights of approach to solution:

- Created and configured an application in two Block Storage (BSO) cubes (for item-level and consolidated planning) and one Aggregate Storage (ASO) cube for financial reporting.
- Configured the financials business process using several data entry forms and complex business rules (i.e., allocations, currency conversion, and driver-based models).
- Loaded historical and GL Actuals, current & approved Budget, and the most recent forecast.
- Incorporated local currency planning and conversion.
- Secured the recurring expense model that offloaded and distributed responsibility from Financial Planning and Analysis (FP&A) team to the individual department owners.
- Integrated Oracle EBS into Hyperion for automated data loads and hierarchy maintenance.
- Implemented analytics to help C-suite strategize the S&M and R&D investments from the HR perspective.
- Deployed scalable workforce planning model for future growth planning.

Impact

After Oracle PBCS implementation, the client witnessed the following:

~50% jump in business productivity with automation of budget & planning analysis and data accuracy.

FP&A team saved over 50% of time with faster and more accurate close and forecast cycles.

Eliminated disparate planning models and manual consolidations.

Effective forecast and budget planning models.

Integrated manual consolidations into the automated system.

About the Client

The client is a consumer entertainment products company headquartered in Chatsworth, California. The company creates innovative proprietary and licensed products including toys and games, dolls, consumer electronics, home décor, stationery and sporting goods. Founded in 1979, the customer operates worldwide.

Solution Components

Oracle PBCS, Oracle Hyperion Financial Management, NetSuite, JIRA
