FORSYS
Forward Thinking

Learn how Forsys helped a media-tech company streamline its sales and invoicing process leveraging Salesforce CPQ & Billing

About The Client

The client is a global leader in cloud-based SaaS technology for broadcast and connected TV. It enables content owners to launch, distribute and monetize live linear channels on connected TV and SVOD platforms. The US-based enterprise works with 500+ content brands, managing 2000+ channel deliveries, with deployments in over 40 countries.

The Background

The media-tech client was looking to automate its revenue and quote processes on the Salesforce platform, which is currently managed using excel sheets and word documents. The manual process resulted in multiple handoffs between sales reps, sales operations, sales management, onboarding and finance teams. This led to inconsistent discounting processes, untracked approvals, time and labour intensive onboarding and billing processes. The client wanted end-to-end process automation that enabled all the teams involved to eliminate manual processing, reduce pricing inaccuracies and sales inefficiencies.

Additionally, the client wanted to ensure their customers experienced little or no impact due to process automation.

The Challenges

The client's business was growing rapidly, and they required an effective and scalable approach to streamline their sales and billing processes across North America, APAC and EMEA. It used Salesforce only till managing opportunities and after that, the product configurations and pricing were stored on Google Drive to share data on active opportunities, which further slowed down its sales cycle.

Since the quotes were created manually, they were error-prone, needed rework and lacked a mechanism to track the present status. As a result, it was operating in a static environment with little room for scalability. Also, the approvals on the discounts and subscription pricing were not being tracked, which resulted in income loss.

Further complicating matters, the client faced a tough time uniting sales efforts due to disjointed Quote-to-Cash processes, tools and data sources.

The Solution

To match the client's evolving business operations, Forsys stepped in to help transform the client's sales operations into a productive and scalable environment.

After reviewing key business processes, our consultants designed and implemented Salesforce CPQ and Billing that helped the client quickly create quotes with an ability to change pricing, discounts, bundles, align sales and finance processes.

Our solution highlights include:

- Streamlined process for Master Services Agreements and Transaction Quotes
- Process improvements to streamline the operations process across multiple geographies
- Accurate sales and business forecasting
- Standardized quote process and subscription setup
- Integration with JIRA for the onboarding process
- Automated invoice generation for recurring and usage products
- Price books based on regions, currencies and complex discounting rules
- Guiding customers throughout the buying journey
- Multi-level approval workflows to streamline and track approvals
- Automated Renewals for the subscriptions
- Integration with NetSuite for customers, products and invoice data to streamline the revenue processes

Benefits & Results

Since the go-live, the client has witnessed a series of benefits comprising:

- Faster automated invoice processing compared to the manual process
- Complete visibility into all the customer's channels and deliveries
- Automation of discounts and tracked approvals for compliance
- Enhanced upsell/cross-sell opportunities
- Higher employee productivity with 50% decline in manual tasks
- Shorter sales cycles and increased conversion using guided selling
- Lowered time to market for new offerings
