FORSYS Forward Thinking | salesforce CPQ

CPQ implementation for a leading technology company

Client Background

Client is a leading technology company that operates intelligent commerce networks.

The company offers real-time commerce platform for connecting retailers, manufacturers and service providers.

Client specializes in promotion network, supply chain and health care platforms enable commerce, generate meaningful data and offer actionable analytics and execution with real-time visibility.

Problem

The company had majority of sales from existing customers only as a result of limited footprint in the e-commerce. The payment transactions were not centralized and at times the payments were handled manually. The customers were not able to manage their digital assets cause of number of emails exchange.

Solution

- Forsys teamed with APTTUS and designed the e-commerce solution for the client on the cloud with the help of Angular JS
- The e-commerce platform is an extension of the CPQ implementation on Salesforce CRM
- Initiated a customer profile for each registered customer in their e-commerce portal. The customer can manage preferences, order history, search history etc.
- The transaction are centralized and automated and integrated with payflow for payment and Avalara for Tax

Benefits

- Quick access for the customers to browse, access and purchase
- Availability of report analysis of sales
- Scalable platform for the client to add more products and expand their business
- CPQ + e-commerce integrated platform for quick configuration of the products and enable a seamless e-commerce cart experience
- Client entered in e-commerce footprint and identified new avenues for improving their revenue
