Success Story

Forsys Tests 12,500 Test Cases, Improves Client's Process Efficiency

About The Client

The client is a leading property and casualty insurance company in Canada that delivers a wide range of Home, Auto, Business, Marine, and Travel insurance products.

What Were the Challenges Faced by the Client?

The client was encountering numerous challenges in the field of testing. So, it looked towards the experience and expertise of Forsys to overcome the restrictions and bring efficiency into various processes.

Some of the top concerns were:

1. The client's QA human resource was short-staffed to test and execute a huge number of test cases.
2. The Forsys team was new to the applications and their functionalities.
3. The Forsys team was expected to execute 12,500 test cases.
4. The timeline was less than 3 weeks.

How Forsys QA Mitigated the Client's Challenges?

Forsys' QA experts worked closely with the client's strategy and development teams to understand the framework of the processes, the backdrop of the applications and their functionalities, and the expected results.

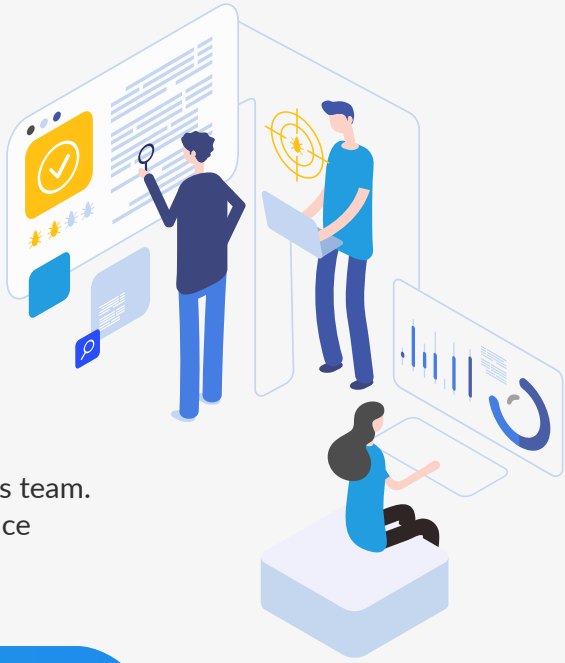
Our QA team uniquely approached the problem statement. Team decided to execute the massive number of test cases manually without any automation for quicker feedback. We used our 20+ years of experience in QA to deliver a whopping 12,500 test cases in just three weeks with zero defects.

It was the first Testing as a Service (TaaS) project, and we completed it satisfactorily to address the client's requirements.

Benefits to the Customer

- Tested **all the** 12,500 test cases
- Delivered **Zero Defects** testing results
- Used **traditional Manual Testing** approach
- Completed testing in a short time of **3 weeks**
- Improved **process efficiency**
- Executed a **well-defined strategy**

Forsys QA's Key Achievements



- Worked closely with the client's team to understand the requirements and expectations.
- Employed the vast experience and expertise of our in-house resources to quickly achieve the results.
- Applied the traditional manual testing method to execute 12,500 test cases with Zero Defects for quicker results.
- Understood that not all test cases need automation. Manual testing is equally relevant in testing different test cases.

The key to our success was a seamless communication with the client's team. With our unceasing efforts, we promptly fixed all the defects to enhance operational productivity.

Traditional Manual Testing Method

Under Manual Testing, we did:

- Functional Testing (Boundary Value Analysis, Equivalence Partitioning, End to End Testing, Critical Business flows validation)
- Integration Testing
- User Interface Testing
- Regression Testing

This success story is a result of the absolute determination and unwavering confidence of the Forsys QA team. Through this success story, we have proved ourselves yet again! For more, we are ready.
