Case Study

Implemented a Digital Commerce Storefront Using RISE

Summary

The client is a well-funded startup company innovating lightweight electric utility vehicles for Farms, Golf Clubs, and other spaces. During COVID, the client witnessed a lack of field sales and wanted to build a self-service store to market and sell their vehicles and batteries across the USA. The client opted for Digital Commerce as the primary platform for their Go-to-Market solution.

The client engaged with Forsys to enable E-Commerce and capture the market. Forsys developed an end-to-end Digital Commerce Strategy and Supported the storefront for the client. The digital commerce portal helped the client get into newer markets, enable personalization, and increase sales.

Problem Statement

The main challenges for the client were:

- The decline in a sales capacity
- Lack of field sales, especially during COVID
- No digital commerce platform to capture the market

Solution

Forsys used its own product, RISE, to enable a digital commerce storefront for the client to expand its marketplaces. For this, we:

- Developed a full-capabilities e-Commerce online store.
- Provided sales and marketing strategies.
- Facilitated customization of products.
- Enabled personalization.
- Authorized promotions, discounts, and other programs to seize newer markets.

Benefits

After building a digital commerce platform with full capabilities, the client can:

- Add products and configure vehicles
- Negotiate product pricing
- Manage pricing and discounts
- Personalize products and provide promotions and programs to capture additional markets
- Finalize proposals and fulfill orders even if the shops are close

About the Client

The client, headquartered in Fremont, California, is a private electric vehicle manufacturing company. The company specializes in intelligent light utility vehicles and focuses on dairies, ranches, farmers, and agriculture utility vehicles.
