Case Study

100% Elimination of Manual Invoice Import & Automation of Invoice Processing with NetSuite ERP

Insight

A global leader in cloud-managed broadcast services and targeted advertising solutions failed to identify the paid invoices in Salesforce CRM and wanted to leverage a separate tool for E2E invoice management.

Forsys provided E2E real-time integration between Salesforce CRM and NetSuite ERP with no disruption to the client's business processes. This eliminated the import of manual invoices, streamlined complex invoicing processes, and reduced the margin of error to zero.

Industry	Revenue	Employees	Headquarters
Broadcast Media Production and Distribution	$20+ M	500+	New York, US

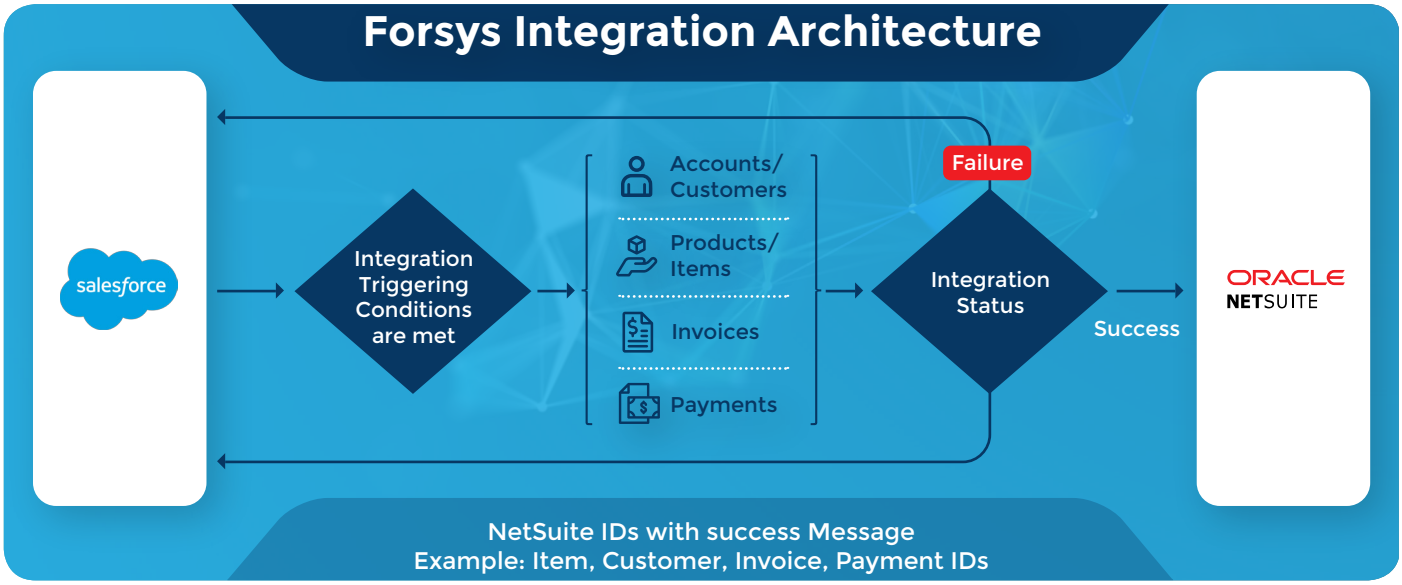
Business Challenges

The client wanted to leverage the best of both worlds, the top-notch CRM competencies of Salesforce and the sophisticated ERP and accounting solutions of NetSuite. The critical challenges faced by the client were:

- Manage the flow of a high volume of transactions from Salesforce to NetSuite at a single point in time.
- Map the transactional data for every subsidiary separately.
- Absence of field mapping due to the absence of matching fields in NetSuite and Salesforce.
- Integration of custom fields for master data in Salesforce and NetSuite.

Transformation Journey

Forsys provided a simplified and cost-effective solution to connect Salesforce CRM and NetSuite ERP. Our implementation methodologies combined with NetSuite SuiteSuccess provided quick integration with minimal disruption to the client's day-to-day business processes.



Forsys Integration Architecture

The key highlights of the approach to the solution are:

- Mapped field after the creation of all the necessary custom fields for master and transactional data.
- Manually tested the data flows from Salesforce to NetSuite in the Sandbox using test scenarios.
- Captured data from Salesforce using JSON formats.
- Leveraged Oauth 1.0 to meet the data flow volume requirement from Salesforce to NetSuite.
- Renamed transactional data as "New" and master data as "Create or Update" after integration.
- Used message response after data transfer is updated.

Benefits & Results

After the integration, the client:

- **Stopped manual invoice import at the end of each period.**
- **Accelerated cash flow and productivity of employees.**
- **Gained real-time data visibility and streamlined procedures.**
- **Segregated data based on the role.**
- **Reduced the margin of error to almost zero.**
- **Accesses client information faster.**

About the Client

The client is an $800 Million cloud-based SaaS technology company for broadcast and connected TV. It enables content owners to launch, distribute and monetize live linear channels on connected TV and SVOD platforms. The US-based enterprise works with 500+ content brands, managing 2000+ channel deliveries, with deployments in over 40 countries.

Solution Components

NetSuite ERP, Salesforce CRM, JIRA
