Case Study

Forsys streamlines end-to-end business processes and implements Oracle SOA Suite for a global software company

About The Client

Founded in 1999, the San Jose-based client is a leading global provider of the cloud and software platforms, systems, and services required to deliver the unified access network and smart premises of tomorrow. Our client's platforms and services help customers build next-generation networks by embracing a DevOps operating model and optimizing the subscriber experience by leveraging big data analytics. Communications service providers rely on this conglomerate to help them master and monetize the complex infrastructure between their subscribers and the cloud.

The Background

The organizational silo and division into varied units of management is a common theme across different global businesses. And this was the case with the client as well. With the multiple business applications, the client's teams were spending more time moving through disjointed processes that made them prone to errors. All in all, the business processes which were supposed to ensure smooth functioning became complex and challenging.

Moreover, the client wanted to eliminate costly errors caused by manual processing and generate real-time purchase orders and invoices. Initiating the electronic data interchange (EDI) process was the obvious choice here because EDI transactions are defined by EDI message standards.

The Challenges

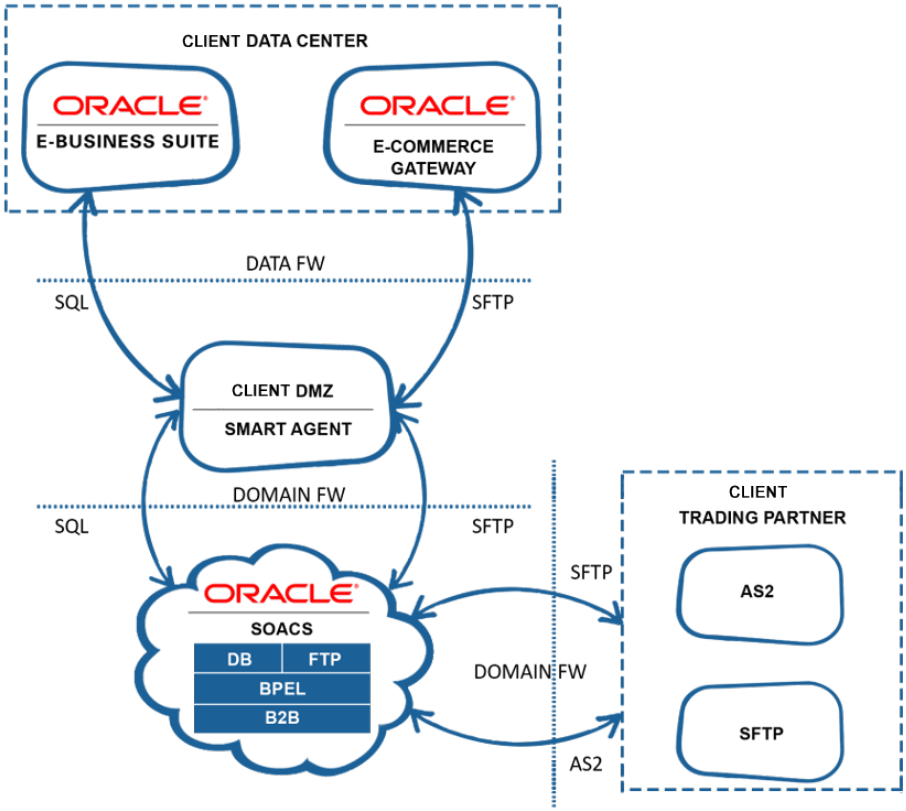
The client aimed at delivering and achieving business efficiency by creating customer journeys and automating sophisticated workflows, but the below-mentioned challenges pushed it to look for a vendor capable of turning things around for them, helping them become more agile and responsive in their initiatives which allows them to outperform their competitors.

- Faced operational issues managing interfaces in Dell Boomi.
- Unable to achieve seamless EDI (850, 860, 855, 856 and 810) transactions and exception handling.

The Solution

The client came to realize that to achieve operational efficiency and ensure a smooth trajectory for business process optimization, a structured strategy is imperative. Forsys came on board as the vendor of choice because of its agile delivery methodology combined with the solution first approach. The solutions offered by the Forsys team included:

- Developed SOA web services integrating Oracle E-Business Suite (EBS) with B2B engine for handling customer EDI Transactions with their partners.
- Built a Robust Exception handling for auto-recovery, error logging, human workflow and reprocess mechanism.
- Customized SOA Suite 12C cloud instance to handle customer EDI Transactions.
- Created reusable and scalable service components (BPEL services, Native Schema's, XSLT Templates).



Benefits & Results

The customer was satisfied with Forsys' agile approach that improved the operational efficiency and led to seamless production.

- Streamlined the complete end-to-end business processes.
- Curtailed waste through integrated planning and supply chain systems.
- Automated upgrades helped to curtail support costs by 50-60%.
- Errors reduced by 90%.
