75% Reduction in Manual Tasks & 360-Degree View Gain of Business Performance with NetSuite

Insight

A leading business and revenue transformation company used QuickBooks and the "MyWorkApps" to capture time entries and generate the payroll and post it to ADP. It executed regular transactions in different instances of QuickBooks and used excel spreadsheets to create consolidated reports.

Forsys leveraged NetSuite to streamline and optimize the back-office operations, deliver insightful financial reports, and get a 360-degree view of its operational performance. As a result, the client reduced 75% of the manual repetitive tasks, 40% of the team efforts, and the period close time by 5 days.

Business & Technology Consulting	$30+ M	400+	California, US

Business Challenge

As the client scaled and expanded their business, the executive management team felt the need for automation for financial reporting, project management, and profit tracking. The financial data lacked real-time analysis and the use of excel spreadsheets hampered the accuracy of sales forecasting and management of customer orders. Due to this overall disjointed approach, their teams and departments failed to collaborate.

Here are the challenges faced by the client:

- Separate logins for the US and India to enter the corresponding transactions and employees.

- Needed minimum 3 days for the finance team to create the consolidated reports.
- Use of multiple excel spreadsheets to prepare and maintain payroll, HR and ADP records.
- Absence of role-based control of the business processes and maker-checker processes.
- Lack of accessibility to employee records in QuickBooks.
- Absence of bird's eye view of transactions.
- Transactions unclassified till the BU level.
- Manual generation of financial reports like P&L reports in excel spreadsheet.

Transformation Journey

Forsys implemented NetSuite OneWorld Financials to unify and centralize the client's accounting, financial, HR and operational activities on one platform.

The following are the key points of the solution approach:

- Implementation of NetSuite OneWorld Financials with the basic HR functionalities.
- Simplification of tax calculations at different nexuses using SuiteTax Engine to ensure compliance with government norms.
- Conceptualization and deployment of a robust accounting segment structure for detailed reporting.
- Implementation of custom reports and saved searches.
- Automation of the payroll file generation process.

Impact

After the implementation of NetSuite OneWorld Financials, the client:

- **Reduced 40% of the team's efforts to generate global consolidated financial rep orts.**
- **Consolidated multi-subsidiary financial data in real-time.**
- **Lowered 75% of manual tasks with the integration of customer invoicing with timesheet entries.**
- **Spent 30% less time generating reports using HR data in excel spreadsheets.**
- **Curtailed 30% of manual labor needed to generate Cost vs Revenue and resource utilization reports.**
- **Reduced the period of close time by 5 days.**
