FORSYS
Forward Thinking

Ensuring Defect free and timely delivery of projects

Client Background

A leading American company based on the Salesforce platform had an objective of having one common centralized platform for client and customer data and reduce test execution time cycle.

Solution

Forsys Quality CoE has produced dramatic results by using automation, standardization, reusable components, and test cases to improve the efficiency and accuracy of our customer testing processes.

Benefits

- Reduced costs by more than 20% by establishing an Enterprise Test Center (ETC) and utilizing a capacity planning model to improve efficiency and resource utilization
- Reduced cycle time by 60-70% through
  - Reusable/re-engineered testing components
  - Introducing a risk-based testing framework
  - Implementing centralized automation testing
  - Standardizing test processes

Client needs met

- Testing of new implementations, global rollouts, upgrades, patch releases and ongoing support
- Automated regression testing
- User acceptance testing (UAT) support
- Consulting, due diligence, test process definition and implementation, metrics definition and implementation

These efforts were appreciated by the client as they also resulted in Defect-free and timely delivery of project deliverables.
