CASE STUDY

Forsys Delivers the First-Ever Salesforce Revenue Cloud Advanced Implementation in India for a Top Data Intelligence Biz, with 40% Faster Deals

The client provides an Agentic Data Management platform that simplifies and accelerates the ability of enterprises to deliver trusted data for AI and other initiatives. Founded in 2018, the California-based company developed the world's first enterprise data observability platform, empowering businesses to build and operate high-quality data products.

Challenges

- Fragmented quote-to-cash process that was offline and highly manual.
- Quotes manually created in spreadsheets, resulting in duplication, errors, and delays.
- Contracts stored as static files with no redlining, version control, or collaboration.
- Lack of automated workflows for pricing approvals and product validation.
- No tools for contract collaboration, making governance and efficiency difficult.
- Heavy reliance on manual follow-ups and offline coordination, limiting visibility into deal progression.

Solution

- Implementation of Salesforce Revenue Cloud Advanced to digitize quoting, pricing, and approval workflows.
- Implementation of Salesforce Contracts to standardize and automate the entire contract lifecycle.
- Integration of Microsoft 365 Azure for seamless online contract review and redlining.
- Enablement of Adobe Sign for fast, secure e-signature collection.
- Establishment of real-time data synchronization between quotes and opportunities for accurate forecasting.
- Elimination of manual bottlenecks to improve compliance and accelerate deal closures.

Value

- 40% Faster Quote Turnaround
- 100% Pricing and Approval Compliance
- End-to-End Visibility across accounts, opportunities, and contracts
- Reduced Manual Work
- Scalable Foundation for future growth
