CASE STUDY

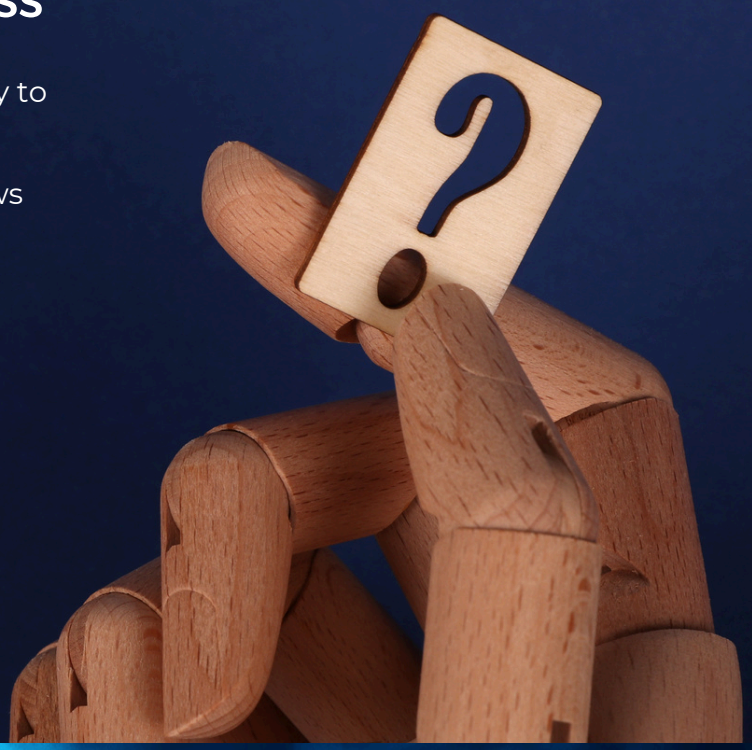
Accelerate CPQ Migration & Drive Revenue Growth with AccélRev for Conga Advantage Platform

Relying on legacy CPQ systems that can't keep up with the dynamic product structures, evolving pricing models, or shifting business processes? Complicated workflows slowing down operations and leading to inconsistent, error-prone data across teams?

Forsys addresses this issue with AccélRev for Conga Advantage Platform (CAP). Purpose-built to deliver a smooth transition to the Conga Advantage Platform (CAP), AccélRev simplifies the migration of complex CPQ data through structured discovery, comprehensive data clean-up, and a carefully phased execution plan —without disrupting your current operations, while maximizing value from day one.

Challenges We Address

- Legacy CPQ tools lack the flexibility to support modern sales models.
- Redundant and outdated workflows slowing performance.
- Manual and siloed processes and causing inconsistent data across revenue systems.
- Limited visibility across product, pricing, and quoting rules.
- High volumes of unvalidated or duplicate data impacting system efficiency.



Forsys' Approach

We begin with a discovery-led methodology that focuses on understanding your current environment and identifying the best path to transition. Our approach ensures high business continuity, data integrity, and optimized configuration.

Here are the highlights of what your transformation journey will entail:

Analyze & Map Your Existing Setup

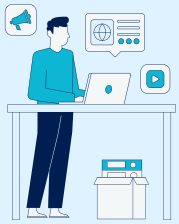
We examine your current CPQ configuration—including product catalogs, pricing logic, dependencies, approval workflows, and metadata—to create a validated foundation for your CAP transformation. This establishes the groundwork for a seamless and efficient migration.

Clean & Validate Configuration Data

We audit and clean your data to identify obsolete, duplicated, or unused records. Only meaningful and validated configurations are retained to ensure a lean, high-performance implementation.

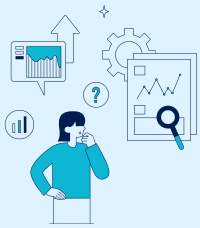
Preserve Product & Pricing Relationships

We map product structures, bundles, pricing rules, and related object relationships to maintain business continuity and minimize rework after migration.



Design a Phased Execution Roadmap

We deliver a strategic, phased rollout aligned with your business priorities. This approach ensures quick wins without disrupting ongoing sales operations.



Maintain Continuity with Structured Governance

We establish robust governance protocols throughout the migration to safeguard business processes, promote adoption, and ensure long-term system stability.

What You Achieve

- Clean, validated data that enhances Platform performance
- Seamless migration to CAP with zero disruption to revenue operations
- Accurate configuration carried over with preserved logic and rules
- Faster go-live with pre-built templates and structured execution
- Scalable foundation to support future product expansion and growth
