salesforce CPQ

CPQ implementation for Singapore Management University

Client Background

University is internationally recognized for its world class research and distinguished teaching. It offers an interactive and technologically enabled pedagogy of seminar-style teaching in small class size which remains its unique hallmark. Academicians collaborate with leading international researchers and universities from USA, Europe, China and India.

Problem

A mechanism was required to interface with customer for reviewing the Custom Program Content from Salesforce. As a part of interactive teaching, it needed a visual of the complete program content such as the faculty, schedule in a single view which can be downloaded and printed. A real-time solution was required for an integration between disparate systems of Web Portal and Salesforce.

Solution

- Forsys furnished a scalable online review mechanism of the program through a WebPortal (Microsite) taking data from Salesforce
- Midas tool provided a Web Service interface for pulling the program data from Salesforce into the Web Portal
- The program details were made available and presented in Web Portal page using a “WindowPane” visual
- Midas facilitated the access to the Web Portal by the Program participants

Benefits

- Quick and improvised review cycle time to finalize the program content/ schedule
- University no longer had to buy exclusive Salesforce Customer portal licenses as Forsys provided online portal with Midas which brought down the costs significantly
- Now, the entire process became seamless and transparent to end users
