salesforce CPQ

CPQ implementation for solar panel manufacturer

Client Background

One of the largest solar panel manufacturers in North America, and the first choice for homeowners and business around the world. The company's diversified global portfolio includes leadership in residential, commercial and utility solar energy markets.

Problem

The company was spread across various geographical locations like France, NA, Belgium, and Italy and had to standardize business processes for all the locations. There was a need for unified sales operations to monitor KPIs and operational metrics along with a CRM integration with existing on-premise and cloud applications. The company was looking forward to improving pace, flexibility and customer relations to support business growth.

Solution

- Originated a comprehensive partner management solution
- Customized SFDC to capture homeowner site information, electricity usage and cost of energy for customers across segments
- Integrated several of the customer's existing applications incorporating both -in house, custom-built applications and commercial-off the shelf
- Management solution also helped in determining ease price schedule, termination value, and recommended pricing levers based on cost and dealer fees

Benefits

- Maximize the return on investment in SFDC and at the same time reduced information silos with integrated applications
- Facilitated company with easy commision of any number of partners it need
