ORACLE
Integration Cloud Services (ICS)

Oracle ICS implementation for leading telecom access

Client Background

A global leader in an access innovation and provide unified portfolio of broadband communications access software, systems and services. The company enables communications service providers worldwide to transform their networks and become the broadband provider of choice to their subscribers.

Problem

Customer used Oracle Agile for Product Lifecycle Management, Oracle EBS for ERP, Salesforce for CRM & Oracle Big Machines for CPQ. The product information was managed manually by the customer business across systems. There was no integration between Agile, EBS and Salesforce which were causing discrepancies the downstream systems.

Solution

- Forsys integrated Oracle Agile PLM, Salesforce using Oracle ICS (Integration Cloud Services), a cloud based integration tool. This integration tool helped Agile Event Handler capture changes in the product information and passed the data to Oracle ICS which turn used Salesforce API to push data into Salesforce.
- We also integrated Oracle EBS and Salesforce with the help of Oracle ICS which resulted in Java concurrent program capturing changes in the product information and pushing it to Salesforce.

Benefits

- Near real-time integration between Agile, EBS and SFDC
- Empowered Sales team with accurate quote integrated with price and product information
- Initiating Agile PLM as a single source of truth for product management
