ORACLE
PLANNING AND BUDGETING CLOUD

Oracle PBCS Implementation for an advertising technology company

Client Background

A leading provider of multi-screen video advertising technology which offers end to end marketing solutions by combining data-driven technologies with deep insight into audience behaviour. The company has products for both supply side and demand side of the digital video ecosystem.

Problem

The client was managing its financial planning with the help of spreadsheets and wanted to automate the process which included financial planning, budgeting and forecasting processes. The key requirements were local currency planning, P&l dashboard, automated data feeds from ERP, drill through details for balance sheet planning.

Solution

- Built a flexible and scalable workforce planning model to accurately plan and prepare for the growth
- Provided analytics to help the senior management to strategize the S&M and R&D investments from human resources perspective
- Built a secured recurring expense model that offloads and distributes responsibility from FP&A team to individual department owners
- Integrated Oracle EBS into Hyperion for automated data loads and hierarchy maintenance

Benefits

- Enabled client with a role based secured and scalable planning application which eliminated disparate planning models and manual consolidations
- Implemented driver based configurable planning application which disposed off ongoing maintenance related to forecast and budget planning
- FP&A team saved more than 50% of the time that resulted in faster and accurate close and forecast cycles
