Case Study

Forsys centralizes Demand Management and Sales Operations and Constrained Supply Plan with Oracle Planning Central Cloud for a Global Leader

About the Client

The client is a leading manufacturer of ice chests, drink containers, and supporting accessories, with a modest metalworking shop since 1947. They are experts in creating products that enable the pursuit of happiness and they constantly innovate, create, and make it easier for the customer. They have more than 500 products sold at hundreds of retailers around the globe.

Business Challenges

The client wanted to integrate multiple applications into a single cloud-based enterprise architecture which enables business growth through a digital transformation while supporting the drive to operational excellence.

The client wanted to streamline the demand management process and the sales operations in the first phase and go with the constrained supply plan in the second phase.

Forsys Solution

Seeking to address several key operational challenges, the client decided to deploy Planning Central leading to improvements in demand planning, S&OP, and more. They also wanted to move Planning Central to the cloud, while retaining business transactions in Oracle EBS.

For the customer, Forsys implemented Planning central, a Cloud-based planning solution that can be integrated with other ERP solutions. Planning Central System collects data from other Oracle cloud systems like Order Management Cloud, Manufacturing Cloud, Procurement Cloud, Product Management, etc., or Import the Data from Other source systems like EBS through FBDI Templates.

You can also review the running tally of the impact of the changes made, to evaluate and determine whether to Accept or Reject an order.

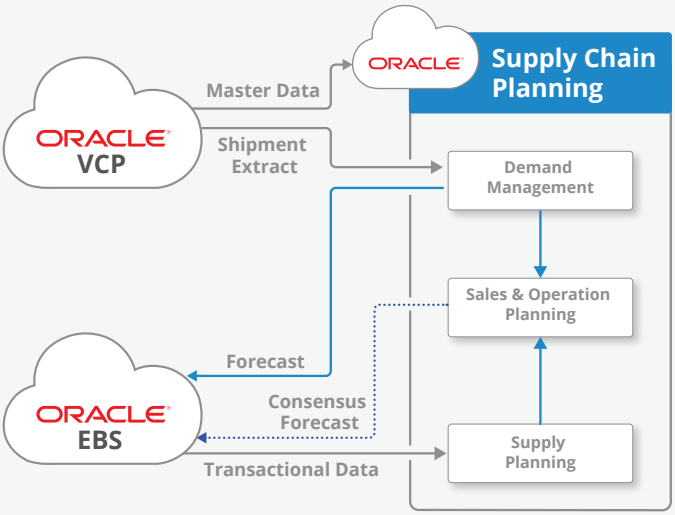
Implementation Process

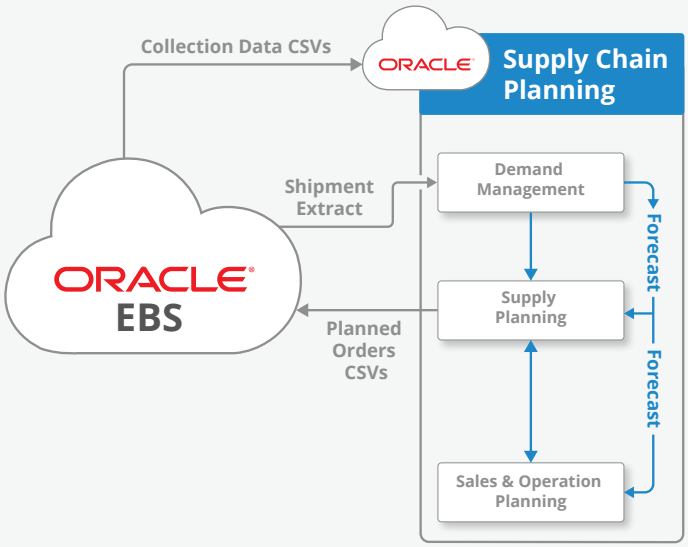
Forsys used Flodata, a proprietary integration tool to connect the cloud and on-premise applications and integrate the data using FBDI templates.

In this process, we mapped the attributes in the required FBDI templates from the Source EBS system. Flodata Integration tool collects the master data and transaction data from EBS source and sends it to the Oracle planning central cloud. With seamless data flow between the EBS system and Planning Central Seamless data flow between the EBS system and Planning Central, the implementation process was simplified and accelerated.

Process Flow for Phase 1

1. Integration Service loading of all the master data required for Demand Management.
2. Load the Sales Manager Forecast Details and Shipment History details to generate the Statistical forecast.
3. Run the Demand plan. If successful, the Shipment and Final forecast are generated
4. Integration Service loads the Final shipment forecast details into the EBS system to run the Constrained Plan.
5. Load the Transactional data into Planning central for running the supply plan.
6. Sales and operations execute plans that achieve business goals and reviews. Sales and operations plan also generate the Consensus forecast.





Process Flow for Phase 2

1. Integration Service loading of all the master data required for Demand Management.
2. Load the Sales Manager Forecast Details and Shipment History details to generate the Statistical forecast.
3. Run the Demand plan. If successful, the Shipment and Final forecast are generated
4. Load the Transactional data into Planning central for running the supply plan.
5. Run the Constrained Supply plan to generate planned orders and safety sock.
6. Sales and operations execute plans that achieve business goals and reviews. Sales and operations plan also generate the Consensus forecast.

Results

- Reduce end-to-end planning cycle time and planning frequency to quickly address demand variability.
- Boost supply chain data accuracy and reduce data latency by integrating Oracle Supply Chain Cloud platform and EBS.
- Reduce order-rescheduling instances & increase promising accuracy based on supply chain inventory.

Benefits to the Customer

- Integrated demand forecasting and supply chain planning on the cloud platform
- Real-time ability to judge the demand-supply balance of SKUs through daily plans and simulation
- Supply chain plan-driven Order inquiry, promising and rescheduling
- 250% time saving due to automation
- Accurate forecasting leading to on-time delivery, directly increasing revenue stream
- Optimized inventory management leading to a $1M saving

FORSYS
Forward Thinking
ISO 9001:2015 Certified Company

- Oracle Cloud Implementation and Integration Experts
- Oracle Co-Development Partner (Supply Chain Cloud)
- 20+ years practicing ERP & Supply Chain
