Case Study

Data Quality Improvement with SAP Data Standardization & E2E ERP Retirement

INSIGHT

A well-known government administration in a prominent charter city in California wanted to standardize and govern their data, retire and replace their existing ERP system, and conduct daily health checks on their enterprise projects.

Forsys conducted a thorough assessment of the requirements and implemented preventive and prescriptive improvements, managed customer incidents, executed upgrades, instituted organization-wide data standardization and data governance policies for SAP, and provided E2E support for the ERP replacement project. This enabled the client to significantly reduce incidents across all levels, improve data quality, ensure application uptime, and reinforce customer loyalty.

BUSINESS CHALLENGE

Lack of data governance and project management expertise and the absence of skilled ERP resources hampered the client's efficiency and productivity and caused data quality issues. Also, their plan to retire and replace ERP was shelved.

TRANSFORMATION JOURNEY

Forsys, in collaboration with the different departments/teams of the client, provided production and data governance support along with project management services.

The notable highlights of the transformation journey:

- Data standardization and ERP upgrade assistance.
- SAP configuration to identify data quality issues.
- Retirement and replacement of ERP.
- Customer-centric project management as and when required.

IMPACT

01 Reduction in incidents across all levels.

02 Data quality improvement.

03 Maintenance of application uptime.

04 Increase in customer satisfaction.

About the Client

The client offers a global center of technology and innovation and is the corporate headquarters for many world-class companies and research facilities. It is also home to top-ranked universities and a public school system. It operates a full array of services, including its own gas, electric, water, sewer, and storm drainage, all provided at very competitive rates for its customers.
