# Engineer-to-Order Process Automation with Conga CPQ Configuration Optimization & Periodic Upgrades Leading to 20% Reduction in IT Costs

## Insight

A leading precast concrete manufacturer that implemented Conga CPQ and integrated it with Rulestream (Siemens PLM) needed help with product set-up, price management, and upgrades to maintain continuity of operations.

Forsys offered managed services to the client, which enabled them to seamlessly manage configuration activities for products, pricing, approvals, templates, contracts, upgrades, and out-of-the-box (OOTB) customizations. As a result, the client saved 20% on its annual IT costs.

## Business Challenge

The client faced challenges in seamlessly managing configuration, upgrades, and out-of-the-box customizations of Conga CPQ.

# Transformation Journey

Forsys provided managed services for Conga CPQ to the client.

The key elements of the service offerings:

- Managed the profiles and permissions related to user access.
- Supervised setup and modification of Catalog and Product configurations, including the rules.
- Changed the existing configurations as well as set up new configurations.
- Implemented setup and changes in price lists and pricing rules.
- Directed setup and replaced approvers/approval rules in Advanced Approvals.
- Executed setup and changes quoting flow including proposal fields and page layouts, catalog and cart columns and actions, and quote status changes.
- Implemented setup and quote templates.
- Reviewed existing customizations, managed issues and changes to custom code developed as part of the Conga CPQ implementation, and deployed enhancements to existing functionality
- Migrated data to production environment.
- Offered best practices and answers to “How to” questions about Conga CPQ.
- Raised requests with the Conga Production Support team to resolve product related issues.
- Developed and supported issues in two non-production environments, and assisted Conga Package upgrades.

# Impact

After the project went live, the client:

- Saved more than 20% in annual IT costs
- Automated the Engineer-to-Order process end-to-end.
- Improved user experience leading to higher adoption by partners and customers.
- Enhanced the scalability of the platform.
- Upgraded Conga on a periodic basis along with extensive testing for business continuity.
- Curtailed defects leveraging preventive maintenance and predictive monitoring.

# About the Client

The client is one of the largest, independently owned, precast concrete manufacturing companies in the United States headquartered in Nevada. The company designs and manufactures standard and custom precast concrete products, and offers high-quality precast concrete solutions for public and private infrastructure projects.
