FORSYS
Forward Thinking

Forsys Enables Technology Innovations Company **Save 80% in Manual Efforts, Automates Cost Element Updates**

Case Study

Insight

The US-based client is a leading innovator in sustainable thermal solutions and engineered materials who wanted to automatically update the Detailed Cost Elements and Multiple Cost Elements for Miscellaneous Receipts.

Forsys used Oracle's REST API and Oracle Integration Cloud (OIC) to automate and update the cost details for inventory organizations. The entire process saved 80% of manual efforts while uploading the detailed item costs.

Industry
Appliances, Electrical, and Electronics and Manufacturing

Employees
5001-10,000

Headquarters
California, USA

Business Challenges

The business challenges for the client were:

- **Users were not able to upload multiple cost elements while loading miscellaneous receipts.**
- **Users had to manually enter the Detailed Cost Elements data.**
- **Users were spending a lot of time updating multiple cost elements.**

Transformation Journey

For the Average cost method, the Standard function allows the users to maintain Detailed Costs with cost elements either by adjusting the costs Manually or through Oracle REST API.

So, Forsys built an integration using Oracle REST API and OIC to upload the Cost elements in bulk and automatically update the elements for the Average cost method. After integration, the users can now save the cost details file in a specific location and can create or update the file based on Users inputs.

Impact

As a result of the integration, the client can now:

- **Save about 80% of User time**
- **Reduce Manual efforts by 80%**
- **Save the Cost Details file in a specific location**
- **Easily update the cost details**

About the Client

The client, headquartered in California, US, innovates and designs technologies in material science, engineered material, and thermal management solutions that protect critical applications of its customers. The client develops and combines technology to achieve set performance targets for its customers' applications. The innovation client also uses thermal solutions and engineered materials to make the products of its customers safer and more reliable.

Solution Components

Oracle REST API and OIC
