Forsys Implements NetSuite ERP for a Data Solutions Provider, Reduces Financial Close from 10+ Days to 4

Insight

The customer, headquartered in Hyderabad, is a leader in data center and cloud solutions. They faced significant operational challenges due to fragmented ERP systems and manual financial processes. The data company collaborated with Forsys to implement a tailored NetSuite ERP.

As a result, the company has streamlined their operations, improved financial and reporting efficiency, and reduced the financial close cycle from over 10 days to just 4. This transformation enabled the customer to scale effortlessly and gain real-time financial insights, driving strategic growth.

Business Challenge

The key business challenges that hindered smooth operations and business growth were:

- Struggled with managing operations across locations due to the use of different ERP systems in various regions: Microsoft Dynamics/Sage in the US, QuickBooks in the UK and Canada, and SAP in India.
- Faced challenges in revenue recognition, as it was tied to Timesheet approvals — an in-house portal built to track employee work hours and approvals.
- Needed a unified system for Financial Consolidation and Reporting.
- Experienced difficulty in tracking and managing customer and vendor invoices, fixed assets, and purchases, highlighting the need for a unified system.
- Realized the need for a scalable solution to adapt to the growing business needs.

Transformation Journey

The Forsys implementation team recommended a comprehensive NetSuite solution tailored to the customer's specific requirements and business processes. Key components of the solution included:

Implementing core NetSuite Financials, Project Management, Advanced Revenue Management (ARM), and Procurement modules to streamline operations and improve efficiency.

Developing customized workflows, reports, and dashboards to align NetSuite ERP modules with the customer's unique business processes and reporting needs.

Seamlessly integrating NetSuite with the customer's home grown Timecard system for efficient Revenue Recognition Accounting.

Providing extensive user training to ensure a smooth transition to NetSuite and offering continuous support to address post-implementation issues.

Impact

Following the NetSuite ERP implementation, the customer experienced remarkable improvement across various aspects of their business, including:

Improved operational efficiency through streamlined processes, automated workflows, centralized data, and reduced manual errors.

Leveraged NetSuite's scalable architecture to expand operations, launch products, and penetrate new markets without major disruptions.

Reduced Financial Close from >10 days to 4 days.

Designed the solution to onboard 10+ Entities in FY25.

Gained real-time visibility through financial metrics, which enabled the customer to make informed decisions and take proactive actions.

Streamlined detailed Financial Reporting & Close process and embedded advanced analytics for deeper insights into revenue and profit margins. This supported the customer's strategic financial planning and analysis.

Use Case 1

Even though the Financial Close was being performed in multiple ERP systems, the customer was consolidating Financial Reports in the US entity. However, the Financial Close and Consolidation processes were manual and prone to errors. This delayed the close cycle by more than 10 days.

Solution

Forsys implemented NetSuite ERP and created an Enterprise architecture for Sub-Entities US, UK, CAN, and India and rolled up into the US Parent (Reporting Ledger).

Finance Operational Efficiency

- Migrated the entire Financial Close, Consolidation, and Reporting into one system, and retired all the manual processes.
- Gained real-time reporting for all Entities including Comparative Analysis between Entities/ Time Dimension.

Use Case 2

The Customer's requirement was to Recognize Revenue after timesheets are approved and de-couple Billing and Revenue Schedules.

Solution

Forsys developed an integration to seamlessly bring approved timesheets from the customer's Custom Application (CPX) into the Netsuite Project module. Forsys also configured ARM to automatically generate Unbilled Accounts Receivable / Revenue.

Finance Operational Efficiency

- Leveraged Netsuite Reporting to provide Entity / Customer Revenue Recognition metrics.
- Consolidated Invoice and Revenue Recognition by Customer and Period.
- Retired the entire manual process of Financial close.
- Reduced Financial Close to 4 days.

About the Client

The customer, headquartered in Hyderabad, Telangana, specializes in delivering cutting-edge and customized data centers and cloud solutions. The company is known for their high-quality and high-performance data centers, Cloud, and AI services that are scalable and run on reliable multi-cloud ecosystems, along with an extensive managed services overlay portfolio.
