Case Study

Forsys' Oracle Order Management Solution Results in 100% Accurate Reconciliation, Provides Real-time Visibility in Revenue

Insight

The US-based client is a printing technology company facing challenges in subscription modules. The client was manually modifying its subscription lines, which slowed down the invoice processing.

Forsys used the oracle order management solution to automate the billing process. As a result, the client observed 100% accurate reconciliation, visibility into real-time revenue data, 95% reduction in manual efforts and more.

Industry: Manufacturing

Revenue: $100+ M

Employees: 201-500

Headquarters: California, USA

Business Challenges

The client was facing multiple challenges in subscription modules and were looking for solutions that could automatically generate invoices with accurate pricing and consumption over a defined period.

The key challenges were:

- Manual modification of multiple subscription lines based on recurring billing plans. For Ex- if the subscription is for 5 years with monthly recurring billing, the user had to enter 60 lines and they had to calculate monthly billing amount.
- Generation of Subsequent Invoices based on Recurring Billing Plan.
- Revision or putting multiple lines on hold for the subscription line until the customer acceptance.
- Cancellation of subscription in an on-going tenure or before the original tenure expires.
- Lack of real-time visibility into billing and financial activities.

Transformation Journey

Forsys provided different Order Flows (covered item, subscription flow, covered and subscription flow, and cancellation of the subscription flow) to address the various business needs of the customer.

As a part of the solution, Forsys automated the clients' billing cycles and provided flexibility to structure payment plans based on the client's requirements within the system. The client can track and view its revenue in real-time and make changes on the go. By creating a more unified and simplified user journey, Forsys helped the manufacturing company focus on its core business strategy and execution.

The transformation journey included:

- Creation of One invoice instead of multiple invoices.
- Generation of invoice begins from the contract start date till the acceptance date. Thereafter, a monthly invoice is generated.
- Billing starts only after user acceptance.
- Generation of credit memos on a pro-rata basis on cancellation.
- Simplification of revision rates as the invoices are generated as per the customer's choice.
- Creation of future invoices based on the revised dates.

Impact

The impact of the Oracle Order Management solution:

- **~70% time saved in manual data entries**
- **100% accuracy through automated subscription processes**
- **90% reduction in user efforts by automating recurring invoices**
- **100% accurate and seamless reconciliation**
- **Simplified Subscription flows**
- **Set up automatic renewals to streamline recurring subscription billing**
- **Prevention of revenue leakage**
- **Complete visibility into the revenue forecast**
- **Enabled pro-rated subscription cancellation in an ongoing tenure and generated automatic credit memos**

About the Client

The client is a venture-backed 3D printing technology company based in California. The company manufactures solutions that help its customers develop distinguished products and reach the market in less time. Global organizations use the client's digital manufacturing platform to create a wide range of functional end-use parts and print them reliably as required.
