Leading Software Company Uses OIC to Integrate Agile, EBS, & SFDC and Simplifies Quoting Process

Insight

The client, a leading software development company, was using different systems for its different processes that resulted in discrepancies in the downstream systems. Also, a lack of integration among different systems was affecting the sales and quoting process.

So, the client collaborated with Forsys to integrate Oracle Agile, Oracle E-Business Suite (EBS), Salesforce CRM, and Big Machines to improve quote accuracy. As a result, the client can now get real-time (<5 secs) data integration, has a single source of truth for product management, improved quote accuracy, and more.

Industry	Revenue	Employees	Headquarters
Software Development	(TTM) $0.73 B	501 - 1,000	California, USA

Business Challenges

The key challenges for the client were:

- Using disparate systems, such as Oracle Agile for Product Lifecycle Management (PLM), Oracle EBS for ERP, Big Machines for CPQ, and Salesforce for CRM.
- Lack of integration between the disparate systems led to discrepancies in downstream systems.
- Manual management of product information across the systems was leading to increased errors and higher turnaround time.

Transformation Journey

To address the challenges, Forsys integrated the systems using Oracle Integration Cloud Services (formerly ICS).

- Oracle Agile PLM using Oracle ICS. The Agile Event Handler captures changes in the product information and transfers the data in OIC, which in turn uses Salesforce API to update the information in Salesforce.
- Oracle EBS and Salesforce using Oracle ICS. The JAVA concurrent program captures changes in the product information and transfers the data in OIC, which in turn uses Salesforce API to update the information in Salesforce.
- Resulted in near-real-time (<5 seconds) data integration among Oracle Agile PLM, Oracle EBS, and Salesforce.

Impact

Post integration the impact were:

- Near real-time data integration between Agile, EBS, and SFDC
- Overall integration ecosystem is easy to manage and gets updates if there is a sync failure. It also helps the team drive better adoption in their existing systems.
- Agile PLM now acts as a single source of truth for product management for the downstream systems.
- Orders captured on Salesforce Ordering Tool have accurate product & pricing information.
- Quote accuracy has improved – the sales team can create accurate quotes with integrated price and product information coming from the master product and pricing systems.
- The project went live in less than 10 weeks.

About the Client

The client headquartered in San Jose, California, is a global leader provider of the cloud and software platforms, systems, and services that are required to deliver an unified access network. Its Unified Access portfolio of broadband communications access software, systems, and services enables communications service providers worldwide to transform their networks and become the broadband provider of choice to their subscribers.
