Case Study

Optimization & Standardization of Contract Management with 45% Improved Accuracy

Insight

A globally recognized healthcare company, working to transform cancer care through early detection, wanted to refine and uncomplicate its buy side of the contract management process. It also needed an approval solution that could work in tandem with and support the overall CLM process.

Forsys implemented the solution that helped the client achieve a 360-degree view of the complete contract lifecycle, standardize the contract management process, and streamline the approval workflow, leading to ~45% jump in contract accuracy, ~42% faster contract processing, and ~43% improvement in contract compliance.

Business Challenge

The client's contract management system for the buy-side contracts lacked structure, which caused problems throughout the creation and post-execution management of thousands of contracts. There were no standard operating procedures for signatures and the approval workflows weren't streamlined.

The use of ad hoc departmental practices (such as Google forms and emails) restricted interactions between business users.

Transformation Journey

Forsys stepped in to help the client with the implementation of Conga CLM to standardize the contract management process, and Conga IWA to streamline the approval workflow.

As a first step, Forsys worked with its business team to discover its current process and document the use cases in detail. After requirements gathering and design were completed, we integrated Conga CLM with their existing Salesforce CRM. Then we assessed the approval structure & workflow with its legal team and implemented Conga IWA because each approval process followed its unique flow.

The key highlights of approach to solution:

- Identified the business drivers for system implementation.
- Recognized the necessary and key functions/ features.
- Performed analysis of Conga CLM and IWA to ensure it met customer needs.
- Deployed Conga CLM and IWA, input contracts, and trained users on systems and processes.
- Formed a team to manage contract data and systems.

Impact

After Conga CLM and IWA implementations, the client witnessed the following:

- **~45% jump in contract accuracy.**
- **~42% faster contract processing.**
- **~43% improvement in contract compliance.**
- **360-degree view of the complete contract cycle.**
- **Enhanced insight into contract performance and processes.**
- **Reduced manual tasks, contract cycle times, and higher contract renewal rates.**

About the Client

The client is a leading US-based healthcare company whose mission is to detect cancer early when it can be cured. It is leveraging the power of next-generation sequencing, population-scale clinical studies, and state-of-the-art computer science and data science to ensure that 50+ types of cancers are detected through a test.

Solution Components

Conga CLM, Conga IWA, NetSuite, JIRA
