Reduction in Software Licensing Footprint with Optimization & E2E Management of Oracle Databases, ERP, and BI

CASE STUDY

Insight

A prominent software and development company was experiencing problems with the management of Oracle databases, ERP, and BI. Also, they needed to address different software audits, installations, migrations, and upgrades to resolve the unstable infrastructure issues and build a robust foundation for digital transformation.

Forsys leveraged its Oracle partnership capabilities to meet the client's E2E platform managed services requirements, which included continuous process and business performance improvement, and streamlining of business processes and IT infrastructure across the enterprise. This enabled the client to reduce their software licensing footprint, improve operational efficiency, and minimize audit liability.

Business Challenge

The client used Oracle databases, ERP, and BI to support their business activities and operations, but often encountered problems related to infrastructure stability and failed to build a well-monitored environment. The dependency on the IT team for their daily tasks hampered productivity.

The key challenges faced by the client:

- Management of EBS systems, databases, integration platforms, applications, technology, cloud strategy, and migration to the cloud.
- Handling support, incident management, change control, documentation, and procedure management.

- Creation and fine tuning of the delivery model for application maintenance, help desk support, and implementation services.
- Management of incident management and change control while adhering to existing SLAs and striving for continuous improvement.
- Maintenance of a knowledge base by documenting procedure management.

Transformation Journey

Forsys provided the client with platform-managed services for its Oracle databases, ERP, and BI, with a focus on continuous business process improvement and streamlining of IT infrastructure.

The key highlights of the approach:

- Management of Oracle applications and databases (including EBS, BI, ODS, & DWH customization)
- Execution of Oracle application disaster recovery
- Designing a strategy for Oracle application backup
- Execution of Oracle EBS periodic instance refresh /cloning including ad-hoc cloning
- Monitoring & supporting Customer 360 / WebServices
- Re-implementation of Oracle Cloud module production support
- Management of a data repository of heterogeneous data sources, known as Datamart.

Impact

- Decline in software licensing footprint
- Improvement in operational efficiency
- Reduction in audit liability

About the Client

Founded in 1999, the San Jose-based client is a leading global provider of the cloud and software platforms, systems, and services required to deliver the unified access network and smart premises of tomorrow. Our client's platforms and services help customers build next-generation networks by embracing a DevOps operating model and optimizing the subscriber experience by leveraging big data analytics. Communications service providers rely on this conglomerate to help them master and monetize the complex infrastructure between their subscribers and the cloud.

Solution Components

Oracle Databases, Oracle ERP, Oracle BI
