Significant Improvement in Customer Retention with Creation & Launch of User-Centric Website

CASE STUDY

INSIGHT

The website of a well-known real estate investment management firm failed to do justice to its brand and positioning. Also, the CTA buttons on the landing page lacked feasibility. The client wanted to modernize their website with new positioning and enhanced experience architecture that represented their vision and business in a contemporary manner.

Forsys conceptualized, designed, and created a new website for the website, which included a simplified menu system enabling easy and quick navigation and the placement of critical information on the fold. As a result, the client saw a jump in bounce rate and returning customers.

BUSINESS CHALLENGE

The client's website was cosmetically outdated and ill-equipped to handle the required level of security to protect client data. They identified the need to redesign their corporate website, along with a complete overhaul in regards to look and feel, flow, ease of navigation, safety, and security.

TRANSFORMATION JOURNEY

Forsys built the new website for the client, which consisted of a simplified menu system offering seamless navigation and placing key information on the fold to allow easy and quick access.

To give their layout a clean and crisp look, we used white space to ensure that clients do not feel overwhelmed.

IMPACT

Higher returning visitors

Better bounce rate

Increased conversion rate

ABOUT THE CLIENT

The client is a real estate investment management firm with the goal of identifying and acquiring commercial real estate at attractive prices while ensuring capital preservation.
