Case Study

Elimination of 90% Order Handling Errors & Streamlining of E2E Business Processes with Oracle SOA Suite 12c Customization

Insight

A leading software development company faced problems with disjointed processes and wanted to eliminate costly errors caused by manual processing. It wanted to generate real-time purchase orders and invoices using the electronic data interchange (EDI) process.

With the Oracle SOA Suite, Forsys developed a customized solution to enable easy handling of customer EDI transactions, built a robust exception handling for auto-recovery, error logging, human workflow and reprocessing mechanisms, and created reusable and scalable service components (BPEL services, Native Schemas, XSLT Templates). As a result, the client reduced 90% of the order handling errors and 50-60% of the support costs with automated upgrades.

Industry	Revenue	Employees	Headquarters
Software Development	$20+ M	500+	New York, US

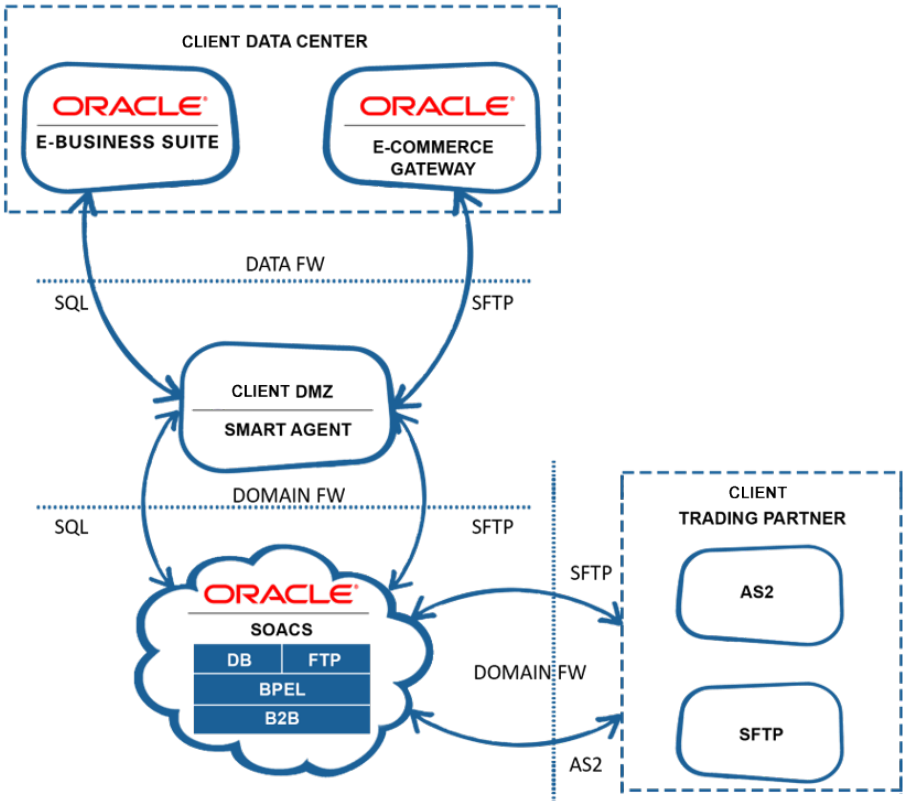
Business Challenge

The client wanted to use automation to build sophisticated workflows, streamline customer journeys, and accelerate business efficiency. But it encountered operational problems in managing interfaces in Dell Boomi and failed to execute EDI (850, 860, 855, 856, and 810) transactions and handle exceptions seamlessly.

Transformation Journey

The client collaborated with Forsys and designed a transformation journey, including:

- Creation of SOA web services to integrate Oracle E-Business Suite (EBS) with the B2B engine to streamline the handling of customer EDI transactions.
- Built a robust exception handling system for auto-recovery, error logging, and human workflow and reprocessing mechanism optimization
- Customization of SOA Suite 12c cloud instance to handle customer EDI transactions
- Creation of reusable and scalable service components (BPEL services, Native Schema, XSLT Templates).



Impact

After the go-live, the customer:

- Streamlined end-to-end business processes.
- Reduced waste via integrated planning and supply chain systems.
- Curtailed 50-60% of the support costs with automated upgrades.
- Removed 90% of order handling errors.

About the Client

Founded in 1999, the San Jose-based client is a leading global provider of the cloud and software platforms, systems, and services required to deliver the unified access network and smart premises of tomorrow. Our client's platforms and services help customers build next-generation networks by embracing a DevOps operating model and optimizing the subscriber experience by leveraging big data analytics. Communications service providers rely on this conglomerate to help them master and monetize the complex infrastructure between their subscribers and the cloud.

Technology/Tools

Oracle SOA Suite 12c, NetSuite, JIRA
