Insight

A global leader in video delivery technology faced growing constraints within its sales applications as it expanded into subscription-based offerings. The existing Big Machines (now Oracle CPQ) platform lacked the flexibility and scalability required to support evolving subscription product and pricing models. Additionally, the use of separate applications for managing renewals resulted in fragmented processes, limited visibility, and inconsistent data across the quote-to-cash lifecycle. With the platform's license nearing expiration, the client urgently needed a risk mitigation plan.

Within just four weeks, Forsys conducted a comprehensive assessment to identify operational inefficiencies and platform risks, including the impending license expiration of the Big Machines (now Oracle CPQ) platform. Through focused advisory sessions and stakeholder alignment, Forsys developed a transformation roadmap that led to a successful migration to Conga CPQ ahead of the license expiration. The engagement enabled quote-to-order automation, scalable subscription-based pricing models, accurate migration of 13K+ products, 11K+ quotes with complex configurators, 2 million assets, and streamlined multi-currency quoting and partner workflows.

Business Challenge

The client's sales applications, powered by the Big Machines (now Oracle CPQ) platform, lacked the ability to support new subscription-based product and pricing models. As the business evolved, the system structure encountered scalability and operational efficiency challenges. The use of separate applications for handling renewals caused fragmented data and inconsistent processes. Moreover, with the license for the Big Machines (now Oracle CPQ) platform nearing expiration, the client was compelled to mitigate risk and modernize its quoting environment.

Here are some of the key challenges faced by the client:

- Inability to scale sales processes for subscription-based products and pricing.
- Disconnected systems handling two renewal systems led to fragmentation.
- Risk mitigation associated with the upcoming license renewal of the Big Machines (now Oracle CPQ) platform.

Transformation Journey

To address the urgent need for a scalable quoting application, Forsys launched a 4-week intensive Assessment & Advisory (A&A) engagement. This involved deep-dive workshops, discovery sessions, and rapid risk assessments to understand the client's current quoting environment, process limitations, and time-sensitive risks—particularly due to the upcoming expiration of the Big Machines (now Oracle CPQ) platform license.

By conducting a comprehensive evaluation of the client's quoting ecosystem, Forsys designed a targeted roadmap to retire the legacy system and adopt the Conga CPQ platform—ahead of the Big Machines (now Oracle CPQ) platform license expiration.

The key highlights of Forsys' Assessment & Advisory include:

- Designed a risk mitigation plan for the Big Machines (now Oracle CPQ) platform license expiration.
- Assessed product and configuration complexity to ensure scalability and support for subscription models.
- Proposed automation for price list creation and multi-currency quoting to streamline global processes.
- Aligned cross-functional teams via workshops to define transformation goals and ensure stakeholder buy-in.
- Defined phased integration between Conga CPQ and Oracle ERP to eliminate manual order entry.
- Outlined a CPQ framework for partner quoting to standardize external sales workflows.
- Reviewed historical quotes and advised on seamless migration of 11K+ quotes and 13K+ products with over 85 complex configurators and rules from the Big Machines (now Oracle CPQ) platform.

IMPACT

- **Successful migration to Conga CPQ from the Big Machines (now Oracle CPQ) platform ahead of license expiration.**
- **Quote-to-order automation.**
- **Enabled subscription-based pricing models.**
- **Accurate migration of 13K+ products and 11K+ quotes with configurators, and 2 million assets.**
- **Streamlined multi-currency quoting and partner workflows**

About the Client

The customer is a US-based video delivery technology and services business that enables companies and service providers to deliver ultra-high-quality broadcast and OTT video services to consumers globally.

Solution Components

Conga CPQ, Oracle ERP, Big Machines (now Oracle CPQ), NetSuite, JIRA
